		2855		

DATE MAILED: 10/08/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

KJ

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/656,340	WENGER ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	Michael Cygan	2855	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 23 August 2004.
- 2a) This action is FINAL.                    2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 12-18,20-37 and 39-67 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) 12-18,20-37,39-43,46-48 and 51-67 is/are allowed.
- 6) Claim(s) \_\_\_\_\_ is/are rejected.
- 7) Claim(s) 44,45,49 and 50 is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 20 February 2004 is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All    b) Some \* c) None of:
1. Certified copies of the priority documents have been received.
  2. Certified copies of the priority documents have been received in Application No. 09/844,013.
  3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### ***Claim Objections***

1. Claim 56 is objected to because of the following informalities: "the excitation current instantaneous" is not an understandable or grammatically correct phrase. Appropriate correction is required.
2. Claim 67 is objected to because it ends abruptly as if in the middle of a phrase, and therefore does not possess clearly defined bounds. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 20, 22-26, 28, 30-34, and 55-58 are rejected under 35 U.S.C. 102(b) as being anticipated by Drahm (US 5,531,126). Drahm discloses the claimed invention, a vibration meter comprising a transducer assembly having a hollow (i.e., containing a lumen) flow tube [13] inserted into a pipe (see abstract) and clamped at the ends (Figures 1b,2b) to enable vibratory motion (column 3, lines 14-15), an electromechanical excitation element [20]

responsive to adjustable frequencies (column 3, lines 58-64) producing spatial deflections of the flow tube (column 3, lines 14-15), upstream and downstream sensors [18,19] responsive to lateral tube deflections and generating representative signals (column 3, lines 51-64), and meter electronics (Figures 4-8) generating excitation current (column 6, lines 43-46) and an evaluation circuit which takes the quotient of the excitation current (a friction value due to force applied in the transverse direction as disclosed at column 6, lines 43-45) and sensor signals (a flow speed estimate as disclosed at column 5, line 65 through column 6, line 4) to produce a viscosity value of the fluid flowing through the meter (column 7, lines 38-58 and column 8, lines 50+) in addition to mass flow and density values (column 6, lines 1-4). The viscosity is inherently a determination of damping due to the measuring tube being filled with fluid of a certain viscosity and the dummy tube having no measurement fluid. Note that a dummy tube is not a flow tube as claimed in claim 28. See also entire disclosure of Drahm.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 12, 14-18, 27, 35, 59, and 61-67 are rejected under 35 U.S.C. 103(a) as being unpatentable over Drahm (US 5,531,126) in view of Drahm (EP 849,568 A1). Drahm '126 discloses the claimed invention except for the generation of torsions about the flow tube. The structural feature missing from Drahm '126 is a lever arrangement acting on the flow tube approximately at the midpoint (which causes torsions, see applicant's page 17, line 15 through page 18, line 2). Drahm '568 teaches the use of a lever arrangement (Figure 15) as an alternative form to a non-levered arrangement (e.g., Figure 2); see column 14, lines 10-13). It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a levered arrangement as taught by Drahm '568 in the invention of Drahm '126 to form the vibration means, since this would result in torsional modes which are well known in the flow art to be used for viscosity analysis.
  
5. Claims 21, 29, 36, 37, 39-43, 46-48, and 51-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Drahm (US 5,531,126) in view of Van Cleve (US 5,661,232). The claimed invention is considered to be taught except for determining density from a sensor value and determining viscosity therefrom. Van Cleve teaches determining density from a sensor value and determining viscosity therefrom in a Coriolis-type viscosity sensor; see entire document especially column 8 lines 48-59. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use

determining density from a sensor value and determining viscosity therefrom as taught by Van Cleve (US 5,661,232) in the invention of Drahm '126 to determine viscosity, since this would result in a viscosity determination which is based upon current data and is compensated for actual measurement conditions.

6. Claims 13 and 60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Drahm (US 5,531,126) in view of Drahm (EP 849,568 A1) as applied to claims 12 and 59, further in view of Van Cleve (US 5,661,232). The claimed invention is considered to be taught except for determining density from a sensor value and determining viscosity therefrom. Van Cleve teaches determining density from a sensor value and determining viscosity therefrom in a Coriolis-type viscosity sensor; see entire document especially column 8 lines 48-59. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use determining density from a sensor value and determining viscosity therefrom as taught by Van Cleve (US 5,661,232) in the invention of Drahm '126 to determine viscosity, since this would result in a viscosity determination which is based upon current data and is compensated for actual measurement conditions.

***Response to Arguments***

7. Applicant's arguments with respect to claims 12-18, 28-37, and 39-54 have been considered but are moot in view of the new ground(s) of rejection.
  
8. Applicant's arguments filed 23 August 2004 have been fully considered but they are not persuasive. As the Office has consistently made clear during the prosecution of this application and its parent application, the determination of viscosity is determined from the excitation current. As stated previously in the parent application, "Applicant argues that Drahm '126 does not teach use of excitation current to determine the viscosity of the fluid. Applicant correctly agrees that the viscosity is determined from diode [52]. Applicant states that the output of diode [52] is not the excitation current; however the claim requires only that the viscosity be determined from the excitation current. Diode [52] receives a voltage from the excitation coils [34,37] of the system [30] used to excite the dummy tube and therefrom the measurement tube; see column 8, lines 55+ and column 7, lines 38-45. This voltage results from the excitation current applied to the coils by system [30]. Therefore, the determination of viscosity is determined from the excitation current".

***Allowable Subject Matter***

9. Claims 44, 45, 49, and 50 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Cygan whose telephone number is (571) 272-2175. The examiner can normally be reached on 8:30-6 M-Th, alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on 571-272-2180. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

MICHAEL CYGAN, PH.D.
